common ground

cg360° Atlas

Find the waste in tools and spend.

Nobody bought the mess on purpose.

Atlas finds the waste in tools and spend, with smart tracking and agentic analysis of redundancies and processes. You get back a priced plan, in sequence.

SPEND
What you pay for, including the parts nobody owns.

RISK
Unverified backups, missing agreements, accounts without MFA.

READINESS
Whether the business could actually absorb a change.

Discovery tools find what you bought. They cannot find the front desk running payments through a personal account, because no software ever asked.

WHAT YOU ACTUALLY GET	Zylo / Torii	Tropic	Atlas
Finds every tool you are paying for	●	◐	●
Catches the shadow accounts and duplicates	●	●	●
Reads the risk, not only the spend	◐	◐	●
Asks your people how the work actually runs	○	◐	●
Hands back a plan, not a dashboard	◐	◐	●

Most of these tools end at a dashboard somebody still has to interpret. We hand back a plan instead: each finding priced, sequenced, and run by operators who have done it before. A map does not save you anything; doing what it says does.

WHAT COMES BACK
A priced plan, in sequence.

See the estate
DIAGNOSTIC

Read-only and expiring. Nothing changes without written approval.

Price the fix
PLAN

What each finding is worth, sequenced into a roadmap.

Run the plan
ENGAGEMENT

Operators who have done it, doing it.

Most of what we find, nobody knew they were paying for.

commonground.ventures

Comparison from published 2026 vendor pages: the Zylo and Torii home pages; Tropic home page, shadow spend, SaaS management and vendor management pages.

Common Ground: capital, operating partners and technology.
