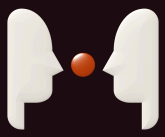
common ground

cg360° Mirror

Clone your best people.



You cannot be in every room.

The questions that need you keep coming whether you are there or not. Mirror clones your best people: judgment and voice, available when you are not, built from your own words, checked against you every week, and private where it must be.

YOUR WORDS

Built from what you have actually said and written, not a persona.

CHECKED WEEKLY

Nine steps every week, including a check of its answers against yours.

FENCED

What it will never say, written down. When it does not know, it asks you.

Drafts go out in your voice, and only on your yes.

WHAT YOU ACTUALLY GET	Delphi	ChatGPT	Mirror
Built from your own words	●	◐	●
Answers in your voice	●	◐	●
A fence around what it will never say	●	◐	●
Sends nothing without your yes	○	●	●
Comes back to you when it does not know	●	○	●
Checked against your answers, weekly	○	○	●

A clone that sounds like you is easy to build. One that is right when it counts has to be checked against you every week, with the gap measured and closed. A voice is easy to copy; judgment has to be tested.

CHECKED AGAINST YOU

Nine steps, every week.

See it beside you

WALKTHROUGH

Its answers beside yours, and the gap between them.

Build yours

SETUP

From your own words, with the fence written first.

Keep it current

ONGOING

The nine steps every week, and the gap closed.

It knows what it does not know. Then it asks you.

commonground.ventures

Comparison from published 2026 vendor pages: the Delphi help center and the OpenAI help center. Nothing goes out in your name without your yes.

Common Ground: capital, operating partners and technology.
