# cg360° Workflows

Map your SOPs. Find what's redundant.

# Find where the work gets stuck.

Map your SOPs and find what's redundant. Workflows is a library of standard operating procedures and best practices: how the work actually gets done. Each one reads in a plain view, with the technical detail one step underneath, and it is bought one department at a time.

### THE LIBRARY

Standard operating procedures and best practices, written down.

### THE PLAIN VIEW

Each workflow reads plainly, with the technical drop-down underneath.

### BY DEPARTMENT

Bought for the part of the business where the work is stuck.

Atlassian's State of Teams 2025 found leaders and teams waste 25% of their time just searching for answers.

| WHAT YOU ACTUALLY GET | Trainual | Process Street | Workflows |
|---|---|---|---|
| A library of SOPs you can use on day one | ● | ● | ● |
| A plain view, with the technical detail underneath | ○ | ◐ | ● |
| Shows where a person steps in | ◐ | ● | ● |
| Finds what is stuck and what is redundant | ◐ | ● | ● |
| Bought by department, not by seat | ○ | ○ | ● |
| **Written and set up for you by operators** | ◐ | ◐ | ● |

A template library gives you a starting point. Somebody still has to write down how your business actually runs, decide where a person signs off, and keep it current. Workflows is written and set up by operators, one department at a time, starting where the work is stuck.

BOUGHT BY

**Department, not by seat.**

## See one

WALKTHROUGH

A workflow from the library, in the plain view and underneath.

## Your first department

SETUP

Written for how that part of the business runs, with the human steps marked.

## Keep it current

ONGOING

The workflows updated as the work changes.

## Start where the work gets stuck.
